

Week 1: Getting Started

Alex Lishinski
August 19 2021

Agenda

1. Introductions to one another and the class
2. A brief introduction to data science and R
3. Discussion of the syllabus

Introductions!

- Alex Lishinski, Ph.D. (they/them)
- Contact:
 - alishins@utk.edu
- Postdoctoral researcher, CS Education, University of Tennessee, Knoxville
- Primary areas of interest:
 - Computer Science education
 - Quantitative research methods
 - Data science in education
- Former philosopher

Introductions!

1. Stuff about you
2. Why are you interested in data science?
3. What tools/experiences do you have for doing data science?
4. What do you think you want to get out of this course?

(10 minutes)

Course FAQ

Q - What data science background does this course assume?

A - None.

Q - Is this an intro stat course?

A - While statistics \neq data science, they are very closely related and have tremendous of overlap. Hence, this course is a great way to get started with statistics. However this course is *not* your typical high school statistics course.

Q - Will we be doing computing?

A - Yes.

Q - Is this an intro CS course?

A - No, but many themes are shared.

Q - What computing language will we learn?

A - R.

12 Let's first load the tidyverse suite of packages.
13
14 If you haven't already, make sure to install the tidyverse, first.
15
16 *You can skip this code "chunk" if you already have the tidyverse installed; you only need to do this once*
17
18 ## {r}
19 install.packages("tidyverse")

21
22 Be sure to run this next line to load the tidyverse. You do this each time you open R.

Over-arching design

The pedagogical framework *plays out* in the following specific ways:

1. You'll first hear about the concepts underlying what you can do
2. You'll see examples of working out these ideas in practice
3. You'll try these ideas out on your own

An argument for this class

- This presentation will make the argument that **you can use R and RStudio to solve problems that are important to you**
- In doing so, you can **participate in a cool community of data scientists in education**

Why learn R?

- It is capable of carrying out basic and complex statistical analyses
- It is able to work with data small ($n = 30$) and large ($n = 100,000+$) efficiently
- It is a programming language and so is quite flexible
- There is a great, inclusive community of users and developers (and teachers)
- It is increasingly used in education
- It can help you to carry out your educational analyses in open and trustworthy ways
- It is cross-platform, open-source, and freely-available

RMarkdown

- RMarkdown is a data analysis "notebook" that combines text with code and output
- It is a great file type to use when beginning to use R and to create reproducible analyses
- It is fun to use because you can generate different types of output (Word, PDF, and even web-based)

Let's look at a bit of code together

What do you think this code will do?

```
sci_mo_processed %>%  
  filter(percentage_earned >= .60) %>%  
  select(student_id, course_id, percentage_earned))
```

Getting Started

- Download R: <https://www.r-project.org/>
- Download Rstudio: <https://www.rstudio.com/products/rstudio/download/>
- Set up a working directory for your class projects

Syllabus

Assignments

- Homework
- Exams
- Final Project
- Others (data ethics, data science resources)

Organization of the class

- Tuesdays - Homeworks due
- Tuesday class - Slides and demo
- Thursday class - Review HW and work through hands on activity
